5/17/2022 2:09:04 PM	Security	EventId: 4624 An account was successfully logged on.	An account was successfully logged on. Subject: Security ID: S-1-0-0 Account Name: - Account Domain: - Logon ID: 0x0 Logon Information: Logon Type: 3 Restricted Admin Mode: - Virtual Account: No Elevated Token: Yes Impersonation Level: Impersonation New Logon: Security ID: S-1-5-21-1691058862-2640770528-2028557413-1103 Account Name: wkampmann Account Domain: FUH.LAB Logon ID: 0x31EF06 Linked Logon ID: 0x0 Network Account Name: - Network Account Domain: - Logon GUID: {3bd45df4-24b5-bd20-c5a0-2998bce061a4} Process Information: Process ID: 0x0 Process Name: - Network Information: Workstation Name: - Source Network Address: 10.0.1.2 Source Port: 49865 Detailed Authentication Information: Logon Process: Kerberos Authentication Package: Kerberos Transited Services: - Package Name (NTLM only): - Key Length: 0 This event is generated when a logon session is created. It is generated on the computer that was accessed. The subject fields indicate the account on the local system which requested the logon. This is most commonly a service such as the Server service; or a local process such as Winlogon.exe or Services.exe. The logon type field indicates the kind of logon that occurred. The most common types are 2 (interactive) and 3 (network). The New Logon fields indicate the account for whom the new logon was created; i.e. the account that was logged on. The network fields indicate where a remote logon request originated. Workstation name is not always available and may be left blank in some cases. The impersonation level field indicates the extent to which a process in the logon session can impersonate. The authentication information fields provide detailed information about this specific logon request. - Logon GUID is a unique identifier that can be used to correlate this event with a KDC event. - Transited services indicate which intermediate services have participated in this logon request. - Package name indicates which sub-protocol was used among the NTLM protocols. - Key length indicates the length of the generated session key. This will be 0 if no session key was requested.
5/17/2022 2:09:04 PM	Security	EventId: 4769 A Kerberos service ticket was requested.	A Kerberos service ticket was requested. Account Information: Account Name: wkampmann@FUH.LAB Account Domain: FUH.LAB Logon GUID: {23a97c95-a8d8-9c50-197f-a014fb697d67} Service Information: Service Name: DC01$ Service ID: S-1-5-21-1691058862-2640770528-2028557413-1000 Network Information: Client Address: ::ffff:10.0.1.2 Client Port: 49867 Additional Information: Ticket Options: 0x40810000 Ticket Encryption Type: 0x12 Failure Code: 0x0 Transited Services: - This event is generated every time access is requested to a resource such as a computer or a Windows service. The service name indicates the resource to which access was requested. This event can be correlated with Windows logon events by comparing the Logon GUID fields in each event. The logon event occurs on the machine that was accessed; which is often a different machine than the domain controller which issued the service ticket. Ticket options; encryption types; and failure codes are defined in RFC 4120.

			(interactive) and 3 (network). The Process Information fields indicate which account and process on the system requested the logon. The Network Information fields indicate where a remote logon request originated. Workstation name is not always available and may be left blank in some cases. The authentication information fields provide detailed information about this specific logon request. - Transited services indicate which intermediate services have participated in this logon request. - Package name indicates which sub-protocol was used among the NTLM protocols. - Key length indicates the length of the generated session key. This will be 0 if no session key was requested.
